CEO

Motion Web

Project: Online Store

Role: Front-end Developer

Technologies: The project was developed using TypeScript, JavaScript, and Sass.

I developed the user interface for one of the key pages of the website, including layout design using Sass. The logic and functionality were implemented using TypeScript and JavaScript.
As part of the project, I implemented the shopping cart functionality, which includes adding and removing items, as well as displaying the total cost. A simple yet unique methodology was employed to enhance user convenience.
I actively participated in team collaboration, including project architecture discussions and code reviews. Additionally, I have experience in SEO, which helps in creating optimized solutions.
I ensured the optimal performance of components and their interactions, as well as the functional and responsive implementation of the user interface.

TimelySoft

Project: Next Pizza
Role: Front-end Developer
Technlogies: NextJS TypeScript TailwindCSS + ShadCN. Prisma React Hook Form Zustand react-use nextjs react
As part of the team, I contributed to the development of a website designed for seamless order placement. My primary responsibilities included:
Creating a dynamic and responsive product catalog.
Implementing a user authentication system using Next.js.
During this project, I gained practical experience with React and Next.js to optimize website performance, accelerate page loading, and enhance user interaction with the interface. Special attention was given to implementing secure user authentication and data management, ensuring the site's stability and reliability.
